EDUCATION

Cavite State University — **Indang, Cavite**
Bachelor of Science in Computer Science — *Sep 2022 – Aug 2026*

PROFESSIONAL EXPERIENCE

Relay · GYG Power Systems Inc. — **Jul 2025 – Aug 2026**
Full-Stack Developer

- Co-developed Relay, a Next.js/TypeScript workspace connecting engineering schedules, task ownership, documents, and reporting through role-aware project views, giving staff one place to inspect status and identify the next action.
- Built report exports combining project status, analytics, and technical documentation into files for staff review and handoff.
- Batched Supabase queries and reused typed models to cut redundant API calls and keep project states consistent.

SELECTED PROJECTS

AutoDev · Lead Intake Automation — **2026**
AI Automation Developer

- Built a shared, rule-based n8n intake for web submissions and app-role Messenger, validating required fields and sequential retries before assigning a route and saving accepted requests to an owner-only queue with pending human-review status.
- Connected the private queue to Google Sheets, Telegram alerts with Brevo fallback, and next-day Calendar reminders; a five-minute reconciliation keeps private copies in sync and cancels or restores reminders as staff change follow-up states.
- Implemented token-protected receipt readback, opt-in redacted proof that hides contact details, and confirmed deletion; controlled fictional requests verified stored status, private Sheet and Calendar cleanup, and preservation of unrelated rows.

Job Hunt Automation — **2026**
AI Automation Developer

- Built a daily Windows-scheduled Python pipeline that collects approved Himalayas and Jobicy listings, validates fields, deduplicates records, and applies explicit fit rules before writing review candidates.
- Created a Google Sheets dashboard and review queue with human-owned fields, ID/hash conflict checks, local snapshots, and recovery paths, keeping applications and outreach fully manual.

Frozen Shoulder DSS — **Dec 2025 – May 2026**
Computer Vision and Decision Support System Researcher

- Built a CPU-only OpenCV/MediaPipe research prototype that estimated shoulder range of motion, counted repetitions, and detected trunk lean and shoulder hiking from video frames for reviewable movement feedback.
- Combined confidence-weighted smoothing and bone-length reliability checks with fuzzy alerts and CSV/PDF reports.

CURRENT TRAINING

AWS re/Start · Edukasyon.ph — **Oct 2026 – present**
AWS re/Start Scholar · FutureSmart Year 2 Batch 31

- Selected as one of the 60 AWS re/Start Scholars out of 800+ applicants for a 12-week cloud computing scholarship program.
- Completing AWS Cloud, Linux, Python, networking, security, and database labs while preparing for AWS CLF-C02 Exam.

TECHNICAL SKILLS

AI & Automation: n8n, Make, REST APIs, webhooks, OpenAI API, Claude, RAG, AI agents, prompt engineering
Development: Python, JavaScript, TypeScript, Java, SQL, PHP, React, React Native, Next.js, Node.js, Express.js, HTML/CSS, Tailwind CSS, Bootstrap, WordPress
Data & Integration: PostgreSQL, MySQL, MongoDB, Supabase, Firebase, pgvector, Google Sheets, Telegram, Brevo, Google Calendar, CRM integrations
Cloud & Tools: AWS, Azure, Google Cloud, Vercel, Docker, Git, GitHub, CI/CD, Playwright, Vitest, Postman, Figma
